

B4B Ltd.

Do-it-yourself CABINS & COTTAGES

Product catalogue

B4B OÜ is a timber products supplier founded in Estonia in 2003. We are specialized in timber products such as wooden houses, construction timber, wood based panels, , machine rounded logs.

The company ensures the delivery of goods to clients' warehouse, deals with logistics and customs clearance procedures.

We value the opportunity of selling such a natural and environmentally-friendly material as wood. High quality, precision, reliability along with proactive approach to work are the qualities our partners choose us for. We help our clients save their time on purchasing materials, provide them with the possibility to focus on the main things. We value our products and proactive relations.

Our name stands for consistent high quality and on-time delivery. Based on the strength of our flexibility and proper performance, our goal is to be a part of your production process on a long-term basis and to serve you as a successful supplier.

B4B OU offers complete wall set for the construction of cabins, cottages, homes, saunas or garden sheds. It is possible to order the project from our finished projects or your individual plan

The manufacturing price depends on complexity of the project, diameter of logs, height of log house, quantities of cut, complexities of the device of a roof. The final price is given to the customer within 1-2 days after project granting. Wall sets are made of spruce or pine trees within 15 - 20 days.

Into the price enters: a material, work on manufacturing walls, marks, loading walls in transport, an assemblage card. Delivery of a material and installation of a blockhouse are paid by the customer in addition.

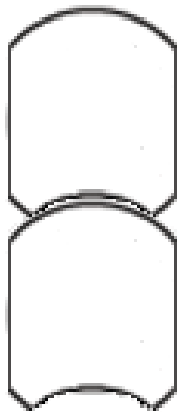

Wall kit package includes:

- Log walls with releases
- Log pediments
- Poles - the big round logs cut into pediments
- Beams of a floor and overlappings
- Building instruction

Log profiles:**Machine rounded logs**

Ø 180 mm- 280 mm

**The rectangular logs**

Thickness from 150 mm- 280 mm

The logs are fitted with exact, tight-fitting wedge profiles. This allows heating energy to remain inside your log home.
